Our vision for a sustainable school is...

Our school vision: Create lifelong learners through quality education that is globally minded within the local community. (We would like to change this to include local, national and global community)

Values: inquiring, respectful, motivated, community-minded, responsible

Vision for a sustainable school: Our entire school community being responsible for the changes we want to make together to be environmentally responsible in all aspects of school life including sustainability citizenship.

My Green Action Plan, formulated SMART:

In our school we are going to create green spaces around the school grounds to promote sustainable citizenship, and facilitate science curriculum goals and interdisciplinary learning within the curriculum

- We will map the school before and after the Green pilots across multiple subjects**
- We will create a before and after exhibition**
- Student Council in both Primary and Secondary to create a Project Diary to document all the steps taken which will be presented at an assembly at the end of the year**
- We will send out a questionnaire about how people feel in the space before and after the project**

My Green Action Plan, formulated SMART:

Achievable Time Frame

We would like to aim to have our initial green space complete by August 2026 and second part by August 2027 and our third and final part by August 2028. By having our entire community, including new potential partners in our area cooperating this goal should be achievable.

Realistic

This aligns with our goal of creating a sustainable place for our students to feel good and learn at the same time.

This links to our vision of creating globally minded students within our entire community (students, parents, teachers, staff)

This plan links to the Sustainable Development Goals:
